Wickidey Whackedy 3D-PRINTING

YEAR 5 use their wacky 3d PRINTER TO MAKE WICKED OBJECTES.

By Tian

In the autumn term the year 5 children got computers and logged in tinkercad and designed there 3d boat designs. After they all finished all their boat designs. Their teacher MR Langley printed all their boat designs. When the boats designs were printed, they tested them in a bucket of water and one by one their teacher called them up one by one.

The children used a program called tinkercad to create their designs .it worked by putting shapes together cutting holes in your design's get created on a workplane .

When the whole class saw tinkercad they were all amazed at how cool it was because you could make anything you want. Once they started to build their boats, they were all amazed once they

were all done their teacher Mr Langley printed them.

A few weeks later MR Langley got a tub of water and called us up one by one brang us up one by one and tested our boats. After we all tested our boats, we cleaned the box and then we waited for them to dry. After we waited for the boats to dry, we announced the winner, loser and the winner was maud and loser dylanR.After we announced the winner and loser we took the boats home to show our parent's.
